WHMCS + cPanel

AutoInstall feature

Summary

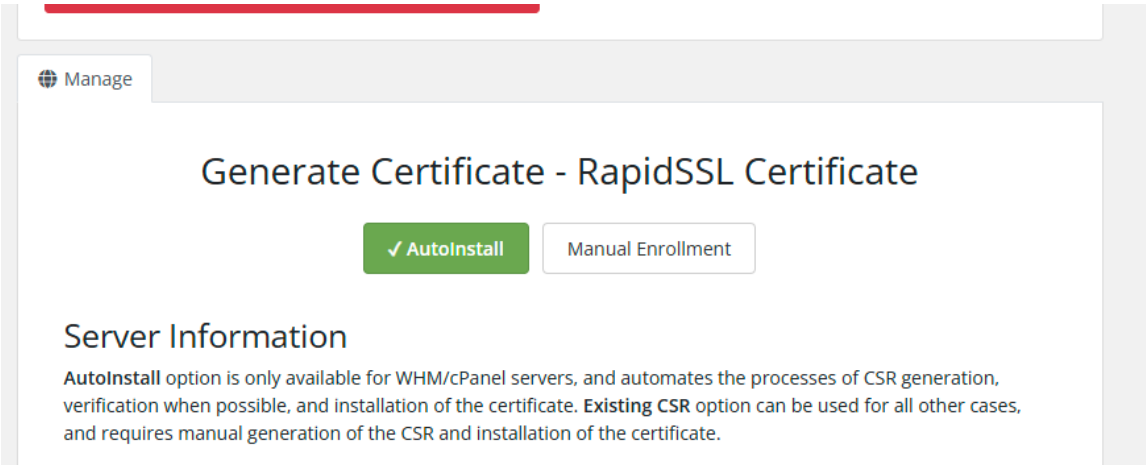

Utilizing WHMCS integrations to connected Servers, offer end users who purchase SSL and have a connected cPanel account the ability to setup SSL automation from their SSL order page. The tool should allow the certificates to auto reissue as the certificates expire until the order term ends. Automation should also recognize impending certificate revocations to auto-reissue and install new certs and confirm success. After initial setup the client should not need to intervene until renewal .

Feature outline

1. Connect WHMCS module to WHM connected cPanel accounts
   https://docs.whmcs.com/8-13/servers/servers/

2. After a purchase is made by a client who has a connected cPanel server the order page will display an AutoInstall button in place of generate link

2.1. Manual Enrollment is standard flow of SSL generation

2.2. **AutoInstall option**

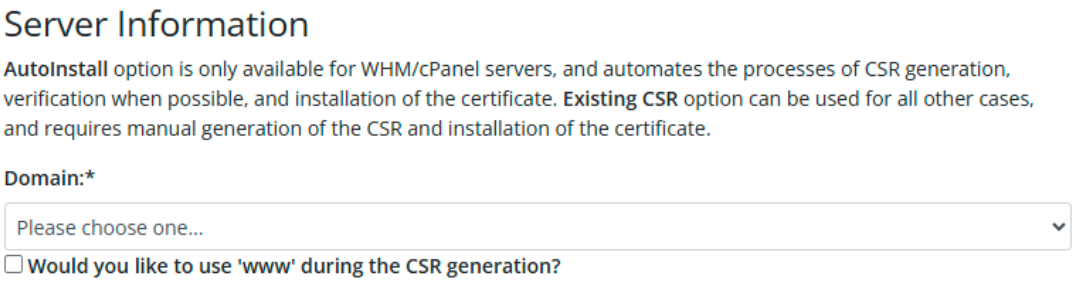

2.2.1. **Block 1. Description of AIS feature**

"Server Information
AutoInstall option is only available for WHM/cPanel servers, and automates the processes of CSR generation, verification when possible, and installation of the certificate. Existing CSR option can be used for all other cases, and requires manual generation of the CSR and installation of the certificate."

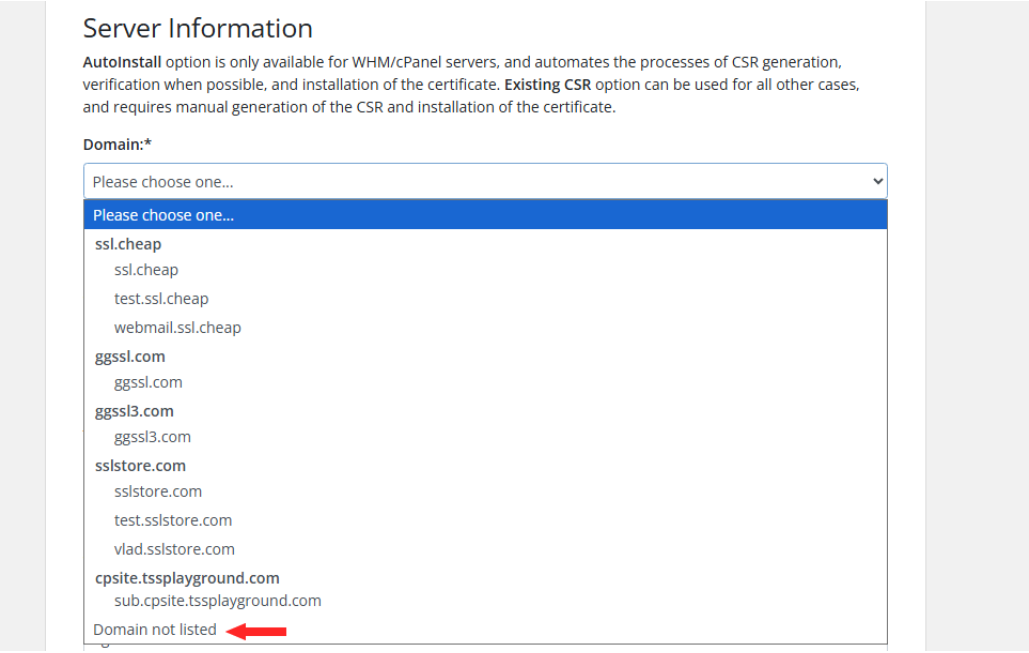

2.2.2. **Block 2. Domain selection:**

2.2.2.1. Would you like to use 'www' during the CSR generation?

If generated as www.name-of-site.com, it will cover both www and non-www URLs.

2.2.2.2. Group sub-domains under domains

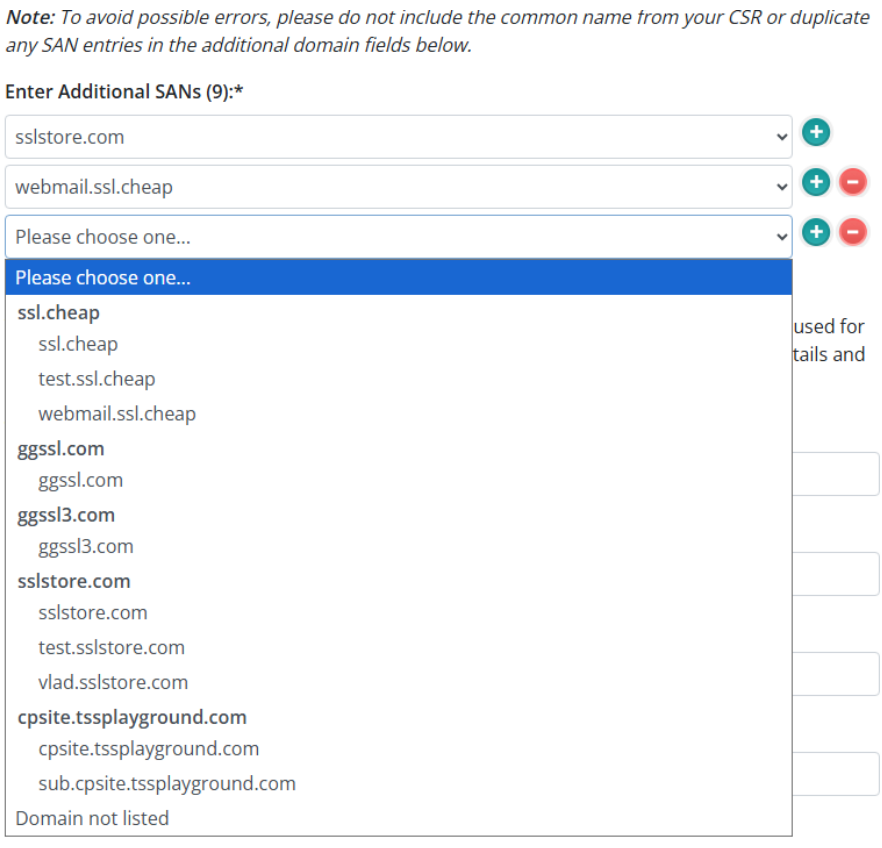

2.2.2.3. Domain not listed

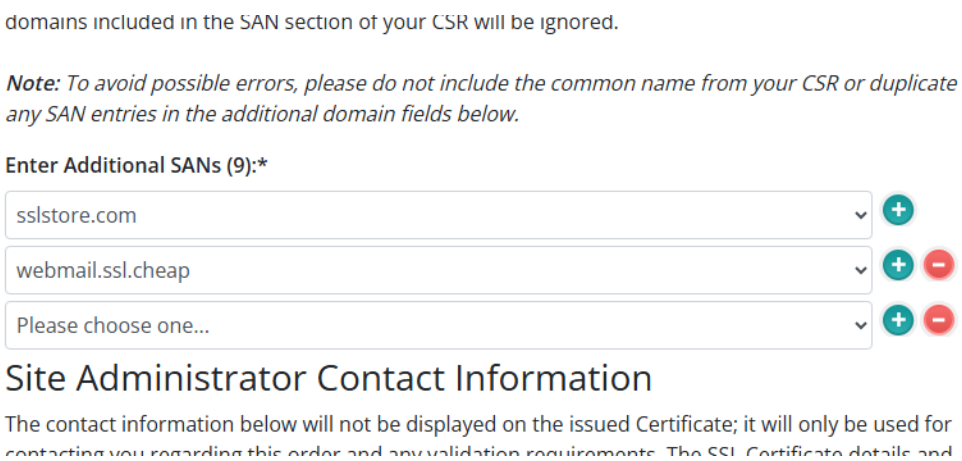

2.2.2.3.1. If selected, change setup to “manual enrollment”

2.2.2.4. Multi-Domain SSL orders

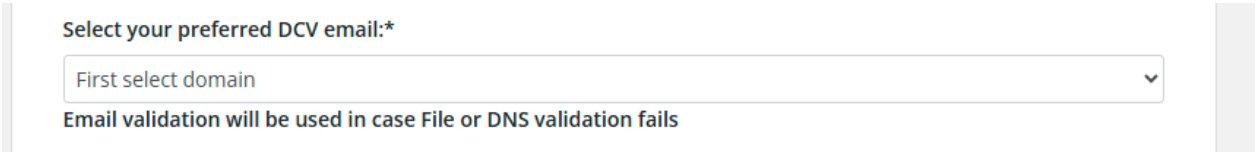

option to add multiple domains from the list

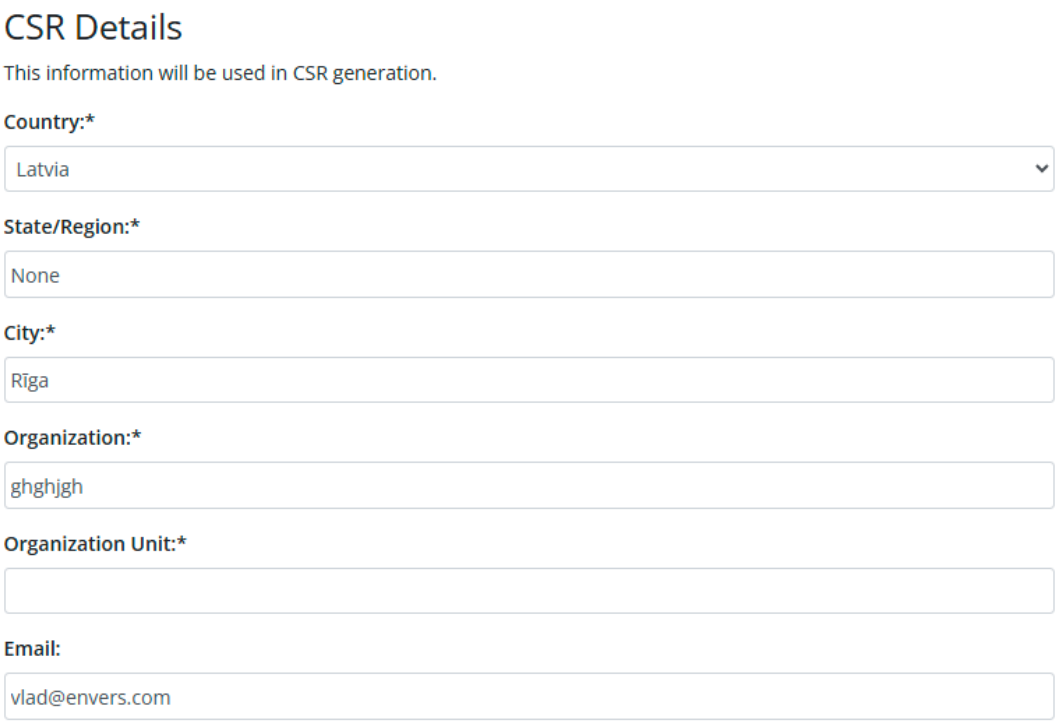

2.2.2.4.1.

2.2.3. **Block 3. Select your preferred DCV email:***
Email validation will be used in case File or DNS validation fails

2.2.4. **Block 4. CSR Details**

2.2.5. **Block 5. Site Administrator Contact Information**
The contact information below will not be displayed on the issued Certificate; it will only be used for contacting you regarding this order and any validation requirements. The SSL Certificate details and renewal reminders will be sent to this contact.

2.2.6. **Block 6. Technical Contact Information**
This person will receive the certificate and is generally the individual that will be installing the certificate on the web server. They will also receive renewal notices when the certificate nears expiration to ensure no security lapses.

2.3. **PAGE 2 (NEXT PAGE)**

We show different messages here:

2.3.1. **Single Domain DV display:**

Thank You
AutoInstallSSL is currently performing domain validation for your certificate. Once the CA validates your domain the certificate will be installed on your server. We will notify you once the certificate is installed. You can check the status on your order detail page.

2.3.2. **Wildcard Domain DV display:**

AutoInstallSSL is currently performing domain validation for your certificate.

If you chose email validation or if DNS validation is not available the CA will email the domain validation for approval to the following emails: ***[DCV email selected]***

Once the CA validates your domain the certificate will be installed on your server.
We will notify you once the certificate is installed. You can check the status on your order detail page.

2.3.3. **Single Domain OV display:**

AutoInstallSSL is currently performing domain validation for your certificate.

Your next step:
Perform Organization Validation, the CA will be emailing and calling the admin contact to confirm the organization is accurate and the contact is authorized.

Once the CA validates your domain & organization the certificate will be installed on your server.
We will notify you once the certificate is installed. You can check the status on your order detail page.

2.3.4. **Wildcard Domain OV dispay:**

Thank You
AutoInstallSSL is currently performing domain validation for your certificate.

Here are your next steps:
Perform Organization Validation, the CA will be emailing and calling the admin contact to confirm the organization is accurate and the contact is authorized. If you chose email validation or if DNS validation is not available the CA will email the domain validation for approval to the following emails: [DCV Email selected]

Once the CA validates your domain & organization the certificate will be installed on your server.
We will notify you once the certificate is installed. You can check the status on your order detail page.

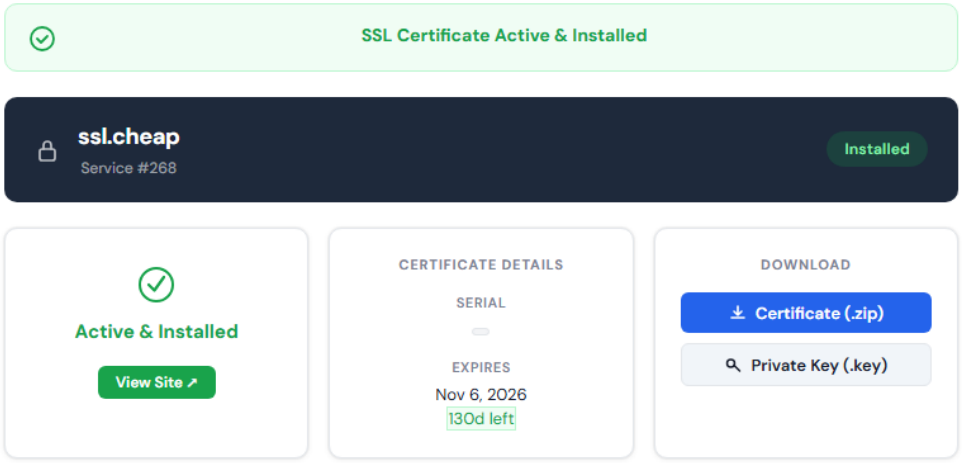

ONCE ENROLLMENT COMPLETED

1. Once submitted AutoInstall will work in the background to do the following
   1.1. Generate CSR + Private Key pair on the cPanel
   1.2. Send order via API
   1.3. Perform DCV
      1.3.1. Non Wildcard
         1.3.1.1. File based validation (DEFAULT) Create file on server with the necessary content provided by the CA
      1.3.2. Wildcard
         1.3.2.1. DNS validation - if selected by client create a DNS record per the CA instructions
         1.3.2.2. Recheck order status every 5 minutes. IF no DNS validation passed after 65(!) minutes change order validation to EMAIL and send email notifications to client from WHMCS.

1.4. Once issued, install the certificate on the server

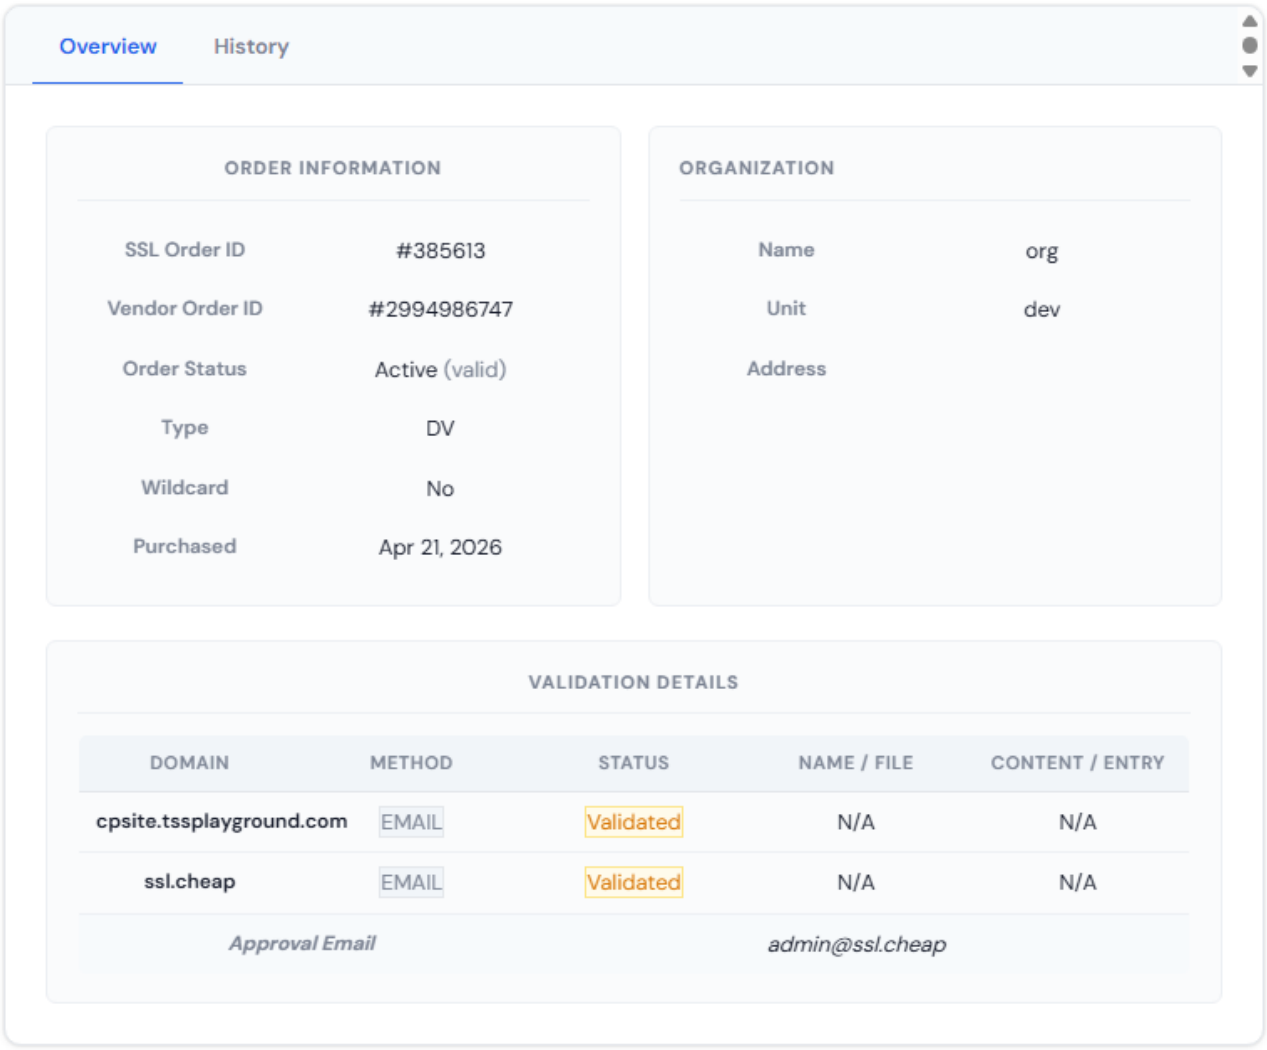

Order description page

1. BLOCK 1
   1.1. **SSL status block:**

   1.1.1. AutoInstall Status available to display:
      1.1.1.1. Installed
      1.1.1.2. Error (couldn't install)
      1.1.1.3. Pending Validation

   1.2. Download SSL + Private key
   1.3. Serial number (if available)
   1.4. Expires
2. BLOCK 2
   2.1. SSL details
   2.2. SAN domain status

Special notes

2.4. CSR and Private Key should be generated and stored in the cPanel, not in WHMCS DB.
2.5. On wildcard orders we use DNS validation, if fails we use EMAIL. HTTP not available for Wildcards

EMAIL templates

1. **Action Required: SSL Certificate Reissue Failed – {$domain}**

   Dear {$client_name},

   We were unable to automatically reissue your SSL certificate for {$domain}.

Certificate expiry: {$cert_expiry} ({$days_left} days remaining).
Error: {$error_message}

Please contact support so we can resolve this promptly.
